? Notation list. ?X for showing a dialog box and hiding a dialog box, respectively. %*?# for changing the current program. *You can replace asterisks with the number "0" at the beginning of a string and you can replace the number "1" with the number "2" and so on. This only works if the command is followed by a space. So "15 *2" would change the current program to 15h. To change to the number 15 when no other command is

present, you would use the string "15": "15".

?[line][number] for following "!" commands, only a specific line can be mentioned. ?:

command for some last minute configuration, some crud can be changed (unlikely, use this with care). ?in for a list of all programs in the drives. ?ok for going back to the normal program menu. ?help for the MS-DOS help file. ?des for the help file of the MS-DOS Boot Sector Edit utility. ?cons for the help file of the MS-DOS Cons Editor utility. ?new for a new

help window. ?help for the MS-DOS help file. ?win for the help file of the Win32 API. ?telnet for a way to connect to the command prompt using Telnet. ?access for the MS-DOS shell. ?chg for changing the current drive. ?save for saving and loading settings (this appears very rarely). ?save2 for saving and loading settings. ?exit for exiting the program. ?open for opening the current file. ?close for closing the current file. ?open for opening the current file. ?dir for browsing a directory. ?dir /? for getting

help on the command dir.
?start for starting a program.
?start /? for getting help on the
command start. ?help for the
MS-DOS help file. ?new for a
new help window. ?exit for
exiting the program. ?des for
the help file of the MS-DOS
Boot Sector Edit utility. ?cons
for the help file of the MS-DOS

What's New In MS-DOS Options?

The MS-DOS Options package is a collection of programs which have one or more internal or external configuration options. Often

these configuration options can be changed by user-defined functions. This package

includes: =====

===== * MS-DOS

Options /dl/ri/opts/manual.txt *

MS-DOS Options

/rt/ri/opts/manual.txt =====

=====

3.49 It doesn't explain how to use them. It has some information about the file

COMOPTS.COM (a DOS

extender), so i guess you don't

need any help on that. MS-DOS

Options For Windows 95 It's not

clear how to get it. Unless you

get it from the authors of the program. The user file is called COMOPTS.COM. It's not clear how to get it. Unless you get it from the authors of the program. The user file is called COMOPTS.COM. MS-DOS Options For Windows 98 MZ-DOS Options Here is the page where I found this. So basically you need to run it from Microsofts website. This is a dump of it. To run the program, you have to double-click on the "Options.EXE" file. After the options window appears, click on "Configuration File" to open

the OPTIONS.EXE program again. The program should automatically load the configuration file. The first time the OPTIONS program is run, a blank configuration file will be created. After that, the program will remember the configuration settings. If you want to use the program on more than one computer, you can save the configuration settings in the OPTIONS.OPT file in the same directory as the OPTIONS.EXE file. The OPTIONS.OPT file is a text file.

Interactive modes

=====

There are several interactive modes available for the OPTIONS program. They are described below. By default, the program is in read-only mode. Changes can only be made using the configuration file. Selecting a mode of operation =====

=====

If you press the "Cmd" key just as the program is started, you will automatically be returned to the configuration file. To move back to read-only mode, press the "Cmd" key again. To

move back to normal mode,
press the "Esc
