 FAQ

Then, type update, and the next time you open Stata, you will see the update notice. If you need to update an older version of Stata, then go to the Stata website at [and follow the link for the latest versions](#). (If you are running Windows, the link will take you to the website for Stata Enterprise.) For more information on updating Stata, see the Stata Help manual, available online at [\(If you are using Windows, the link will take you to the website for Stata Enterprise.\)](#) If you are using Stata 14 or later, you may also want to have the latest version of the ATLAS Gateway available. With Stata 14, you can import data from ATLAS into Stata, and back into ATLAS. You can also export data from Stata to ATLAS. In the past, this was a slow process. With Stata 14, you can do this much faster. If you are using Stata 14 or later, then ATLAS will be automatically installed. If you are using Stata 11 or earlier, you will need to install ATLAS first. You will need to download the latest release of ATLAS. For information on how to download ATLAS from the website, see below. For the version of Stata you are using, you will need to download a different release of ATLAS. If you are using Stata 14 or later, then the Stata/R interface will be available. For information on how to use the Stata/R interface, see below. There are three versions of Stata. Stata 13 (for Windows) Stata 12 (for Windows) Stata 11 (for Windows) The most common version of Stata is the Stata 13 version for Windows. The Stata 11 and Stata 12 versions are less commonly used. Stata has two components: Stata 13: Uses a network of computers on which scientists work. Stata 14: Uses a network of computers on which scientists work.
